

Problem 1

problem 1

```
student=["Arun","Bala","Kavin"]
```

```
New_student="Ravi"
```

```
student.append(New_student)
```

```
print("Update Student",student)
```

#test case

```
student=["Arun","Bala"]
```

```
New_student="Ravi"
```

```
student.append(New_student)
```

```
print("Update Student",student)
```

```
student=["Kavin"]
```

```
New_student="Mohan"
```

```
student.append(New_student)
```

```
print("Update Student",student)
```

```
student=[]
```

```
New_student="Priya"
```

```
student.append(New_student)
```

```
print("Update Student",student)
```

```
student=["A","B","C"]
```

```
New_student="D"
```

```
student.append(New_student)
```

```
print("Update Student",student)
```

output

```
Update Student ['Arun', 'Bala', 'Kavin', 'Ravi']
```

```
Update Student ['Arun', 'Bala', 'Ravi']
```

Update Student ['Kavin', 'Mohan']

Update Student ['Priya']

Update Student ['A', 'B', 'C', 'D']
