

Problem 3

```
students=["Arun","Bala","Kavin","Ravi"]  
New_student="Mohan"  
position=2  
students.insert(position,New_student)  
print("Updated=",students)
```

#test cases

```
students=["A","B","C"]  
New_student="x"  
position=1  
students.insert(position,New_student)  
print("Updated=",students)
```

```
students=["A","B","C"]  
New_student="5"  
position=0  
students.insert(position,New_student)  
print("Updated=",students)
```

```
students=["Java","Python"]  
New_student="c++"  
position=1  
students.insert(position,New_student)  
print("Updated=",students)
```

```
students=["P","Q","R"]  
New_student="S"  
position=2  
students.insert(position,New_student)  
print("Updated=",students)
```

output

Updated= ['Arun', 'Bala', 'Mohan', 'Kavin', 'Ravi']

Updated= ['A', 'x', 'B', 'C']

Updated= ['5', 'A', 'B', 'C']

Updated= ['Java', 'c++', 'Python']

Updated= ['P', 'Q', 'S', 'R']
