

Problem 5

```
courses=["Python","Java","SQL","Spring"]
```

```
Remove=courses.pop(3)
```

```
print("Remove courses=",Remove)
```

```
print("Updated courses=",courses)
```

#test case

```
courses=["A","B","C"]
```

```
Remove=courses.pop(2)
```

```
print("Remove courses=",Remove)
```

```
print("Updated courses=",courses)
```

```
courses=["Python","Java"]
```

```
Remove=courses.pop(1)
```

```
print("Remove courses=",Remove)
```

```
print("Updated courses=",courses)
```

```
courses=["10","20"]
```

```
Remove=courses.pop(1)
```

```
print("Remove courses=",Remove)
```

```
print("Updated courses=",courses)
```

```
courses=["Pen","Book","Bag"]
```

```
Remove=courses.pop(2)
```

```
print("Remove courses=",Remove)
```

```
print("Updated courses=",courses)
```

output

Remove courses= Spring

Updated courses= ['Python', 'Java', 'SQL']

Remove courses= C

Updated courses= ['A', 'B']

Remove courses= Java

Updated courses= ['Python']

Remove courses= 20

Updated courses= ['10']

Remove courses= Bag

Updated courses= ['Pen', 'Book']
